Skills

Languages:

HTML
CSS
Javascript
Typescript

Technologies:

Node
Express
React
Git
Playwright
Apollo Client
GraphQL
NextJS

Experience

[My favorite Quilt Store](#) — *Front-end Web Developer*

JAN 2022 - MID OCT 2022

A remote role at an e-commerce store, working on the site redesign using **React** and **Typescript** to add new features, fix bugs and improve user experience. My skills have improved dramatically, learning to work with a large code base, write code that is dynamic and readable, thoroughly test new features, and gain some experience working with a team remotely. Also used **Playwright**, **Apollo Client** and **GraphQL**

[Annex Distribution](#) — *Full Stack Web Developer*

OCT 24 2022 - JAN 1 2023

A remote role at a canadian distributions company, working on frontend, backend and multiple projects within the organization. Beginning to convert one of their projects to typescript, this was cut short due to the bosses wanting to prioritize another project. With this new project, implemented a new design for their order page and worked on small features to make the quality of life for the users better. The main technologies here were **Typescript**, **React**, **Next** and **AWS DynamoDB**.
