Skills

Languages: Technologies:

| | |
|------------|---------|
| HTML | Node |
| CSS | Express |
| Javascript | React |
| TypeScript | Git |

Experience

[My favorite Quilt Store](#) — *Front-end Web Developer*

JAN 2022 - Present

A remote role at an e-commerce store, working on the site redesign using **React** and **TypeScript** to add new features, fix bugs and improve user experience. My skills have improved dramatically, learning to work with a large code base, write code that is dynamic and readable, thoroughly test new features, and gain some experience working with a team remotely.

Projects

[Falling Emotes Game](#)

This was a project for twitch.tv streams. Created a chatbot that watches for when someone puts an emote in the chat and sends a message over websockets to a server. The server renders the emote onto a canvas element that has physics, making the emote fall from the sky. Built with **Javascript**

[Front end for an Ecommerce Site](#)

This project uses sessionStorage, query parameters and redux state to keep track of everything happening. Built with **React** and **Tailwind**
