tristan@tristanmyers.dev

Skills

Using languages such as HTML, CSS, Javascript, Typescript, C and Nim to work with technologies such as Node, React, Git, Playwright, Apollo Client, GraphQL and NextJs

Experience

My favorite Quilt Store — *Front-end Web Developer*

JAN 2022 - MID OCT 2022

A remote role at an e-commerce store, working on the site redesign using **React** and **Typescript** to add new features, fix bugs and improve user experience. My skills improved dramatically, learning to work with a large code base, write code that is dynamic and readable, thoroughly test new features, and gain experience working with a team remotely. Used **Playwright**, **Apollo Client** and **GraphQL**

Annex Distribution — *Full Stack Web Developer*

OCT 24 2022 - JAN 1 2023

A remote role at a Canadian distributions company, working on front end, back end and multiple projects within the organization. Beginning to convert one of their projects to typescript, this challenged me to think about program architecture in order to create the necessary typed structures. Began a new project, implemented a new design for their order page and worked on small features to make the quality of life for their users better. The main technologies here were **Typescript**, **React, Next and AWS DynamoDB**.

Personal browser homepage

A server side generated web page that features an RSS feed and some common links for quick access check out the GitHub repo to see some interesting over engineered features that are happening on the back-end. Created with the **Deno** javascript runtime.
